DETAILED ACTION

Request for Continued Examination

The request filed on 11/07/2006 for a Request for Continued Examination (RCE) under 37 CFR 1.114 based on parent Application No. 09/938366 is acceptable and a RCE has been established. An action on the RCE follows.

This communication is in response to applicant's 11/07/2006 amendment(s)/response(s) in the application of **OLLIS et al.** for "**ARCHITECTURE FOR LINKING MULTIPLE INTERNET PROTOCOL TELEPHONY DEVICES HAVING A COMMON TELEPHONE NUMBER**" filed 08/24/2001. The amendment/response to the claims have been entered. No claims have been canceled. No claims have been added. Claims 1-2, 4-38 are now pending.

EXAMINER'S AMENDMENT

An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it MUST be submitted no later than the payment of the issue fee.

Authorization for this examiner's amendment was given in a telephone interview with Lawrence T. Cullen on 12/8/2006.

The application has been amended as follows:

Art Unit: 2616

1. (Currently Amended) A method for connecting a plurality of devices which have a common telephone number and which are connected to a network, comprising the steps of:

looking up the telephone number in a table that associates the telephone number with a plurality of devices having an address, each device having a unique domain name;

establishing a connection with at least one of said devices;

establishing a bridge between that device and a secondary device, the second device having a different address than the first device and a common telephone number with the first device, whereby the common telephone number enables the first device and the second device to connect to a communication with another device without further connection,

wherein the step of looking up the telephone number in the table is performed by a call agent, the devices are connected to gateways, and the call agent connects a gateway, which establishes the connection with the first device.

2. (Cancelled)
4. (Cancelled)
5. (Cancelled)
6. (Cancelled)

7. (Currently Amended) The method of claim [[4]] 1, wherein the gateway contacted by the call agent establishes a bridge to a second gateway, to which a second device is attached.

8. (Currently Amended) The method of claim [[5]] 1, wherein the first gateway mixes information from both at least one device attached to the first gateway and at least one device attached to the second gateway.

25. (Currently Amended) An apparatus for connecting a plurality of devices which have a common telephone number and which are connected to a network, comprising:

a call agent that associates the telephone number with a plurality of devices, each of which has a unique domain name;

a network for establishing a connection with at least one of said devices;

gateways to which the devices are connected; and

a bridge between that device and a secondary device, the second device having a different address than the first device and a common telephone number with the first device, whereby the common telephone number enables the first device and the second device to connect to a communication with another device without further connection,

wherein the call agent contacts a gateway, which establishes a connection with a first device.

26. (Cancelled)

27. (Cancelled)

28. (Currently Amended) The apparatus of claim [[27]] 25, wherein the gateway contacted by the call agent establishes a bridge to a second gateway, to which a second device is attached.

29. (Currently Amended) The apparatus of claim [[28]] 25, wherein the first gateway mixes information from both at least one device attached to the first gateway and at least one device attached to the second gateway.

38. (Currently Amended) A method for connecting a two devices which are associated with a common telephone number, comprising the steps of:

looking up the telephone number in a table that associates the telephone number with the domain names of at least one of the devices; each device having a unique domain name;

establishing a connection with that device;

establishing a secondary connection between that device and a secondary device, the secondary device having a different address than the first device and a common telephone number with the first device, whereby the common telephone number enables the first device and the second device to connect to a communication with another device without further connection.

wherein the step of looking up the telephone number in the table is performed by a call agent, the devices are connected to gateways, and the call agent connects a gateway, which establishes the connection with the first device.
